**SELEX Galileo signs 74 million Euro contracts for the supply of THETIS electro-optic sensor**

SELEX Galileo of Finmeccanica has recently signed contracts worth 74 million Euro for the supply of THETIS and other land electro-optic systems. 70% of these contracts come from the international market.

THETIS is an electro-optic sensor operating day and night able to track fixed and in motion targets. SELEX Galileo has developed the THETIS and, while retaining the production for the Italian end user, has entered in partnership with local industries for the production of other systems.

These new contracts further confirm not only the success of THETIS family, but also SELEX Galileo long lasting and consolidated experience in the field of sensors and electro-optic systems for observation and tracking, making SELEX Galileo a key player in the international field.

SELEX Galileo

SELEX Galileo is the brand used by Galileo Avionica and SELEX Sensors and Airborne Systems, both Finmeccanica companies, to jointly operate on the market.
