

Towards a safer world

**WHEN YOU GO IN HARM'S WAY,  
YOU WANT THE BEST TECHNOLOGY ON YOUR SIDE.**

For a tired pilot returning from a long sortie, the recovery to a small, moving flight deck in poor visibility can quickly become the most dangerous part of the mission. That's why three navies have equipped their capital ships with our Precision Approach Radar (PAR), providing aviators with accurate and reliable final approach and deck landing cues, in all weathers, day and night. Effective out to a range of 12 miles, our PAR solution enables carrier controlled approaches to be flown with safety and confidence.

**Locking on to bring pilots home safely. Tomorrow's technology is here today.**
