SELEX Galileo signs a formal collaboration agreement with the Italian Navy's Centre for Support and Testing

SELEX Galileo, a Finmeccanica Company, has signed an important agreement with the Italian Navy's CSSN (Centro di Supporto e Sperimentazione Navale – Centre for Support and Testing) that will see the two organisations work together to develop innovative technologies.

The understanding between the CSSN, which will operate through the Institute for Telecommunications and Electronics based in Livorno, and SELEX Galileo paves the way for joint research and development activities following the guidelines of the Italian Navy's Department of Telecommunications and Electronics.

Under the agreement, possible synergies will be identified that will enable the two organisations to improve the performance, quality and reliability of products. Aerial and naval targets and simulators will be used to meet these goals, and SELEX Galileo will carry out tests to validate the expected performances of simulation systems and electro-optical equipment.

The understanding also sets up a framework for the identification of future research and testing opportunities. It is expected that this will lead to future collaboration, including the exchange of goods and services.

Notes to editors

The CSSN is involved in telecommunications, electronics and logistics support. It tests and evaluates new equipment in collaboration with other Italian Defence Agencies.

SELEX Galileo offers technical excellence in electronics and electro-optics. A leader in defence markets, the Company is also involved in the applications of IR sensors in embedded systems, applied research, and the testing and implementation of new equipment.
