PRESS NOTE

SELEX Galileo Inc. Dedicates its Security Assistance Center to Local Fallen Marine: 1STLT Donnelly

Newly-named William J. Donnelly IV Security Assistance Center offers troops and first responders state-of-the-art training facility

KILN, MS – SELEX Galileo Inc. announced today that it is dedicating its Security Assistance Center to USMC First Lieutenant William J. Donnelly, IV who gave his life in support of Operation Enduring Freedom.

Bringing together members of the local government, industry, and military, the dedication is a symbol of the commitment the Company is making to the area and the end users. The facility was built to print for the customer and specifically designed to support specialized training missions. SELEX Galileo Inc. CEO Giles Kyser explained, “This Security Assistance Support Center will bring the best of industry, the military, our diplomatic corps, our communities and our first responders together to create solutions for challenges like the one for which Will Donnelly gave his life.”

First Lieutenant Donnelly was raised in nearby Picayune, Mississippi and went on to join the United States Marine Corps where he distinguished himself with various service awards to include a Purple Heart and the Navy and Marine Corps Commendation Medal with Combat “V” for heroic achievement. SELEX Galileo Inc. CEO Kyser continued, “we take great pride in dedicating this facility in honor of Lieutenant Donnelly, to support future troops in the type of training missions that men like Will exemplify.”

The center offers customers an exceptional operational training environment that is unmatched anywhere in the United States. Located on Stennis International Airport, the site gives combined access to sea, land and air in a small setting as well as access to an exclusive acoustic easement zone afforded by its proximity to the NASA Space Center. The on-site Integrated Support Facility offers 19,000 square feet of climate-controlled space, to include an operations room that allows users to simulate a fully-functional Joint Operations Command Center, complete with live Intelligence Surveillance and Reconnaissance (ISR) streaming capability.

The entire facility is designed to allow the user to conduct various training activities all while maintaining a low signature profile, a key differentiating factor for special operations communities and international partners.
